The purpose of this study is to examine parent perception of symptoms and communication abilities in children with selective mutism. Eligible participants include parents of 6- to 10-year old children with selective mutism.

We are asking to use your data for research purposes. You will be asked to complete a questionnaire online examining the behavior and communication abilities of your child. All information you give is anonymous. Your participation in this research project is voluntary and should last between 20-35 minutes.
